Product Data Card

Reverse osmosis and ozonation are used as a purification process on water obtained from a public or private distribution system

Osmosis

Water diffuses through a semipermeable membrane toward region of higher concentration to equalize solution strength. Ultimate height difference between columns is “osmotic” pressure.

Reverse Osmosis

Applied pressure in excess of osmotic pressure reverses water flow direction, hence the term “reverse osmosis”.

Still & Sparkling Water

Prepared Purified Water to refresh your day

Still Water :

Sizes : 330 ml , 500 ml, 1 L,1.5 and 5 L
